

GreenShield Maintenance Medication Fill Limits

GreenShield will limit the number of fills to five per year for maintenance drugs included in the list below. Claims for drugs that GreenShield has deemed to be maintenance will be denied if dispensed for less than a three-month supply; the response code from the GreenShield system for these claims will be: “DR = days supply lower than minimum allowable.” The use of an applicable intervention code will be allowed in individual situations where dispensing of a three-month supply may not be appropriate at that time. Use of the intervention codes listed below will be subject to audit and must be supported with relevant documentation on the prescription hard copy.

ER = override days supply limit for period

MN = replacement claim due to dose change

MY= long term care Rx split for compliance

For patients requiring ongoing, more frequent dispensing – due to a cognitive impairment or other issue – an exception request form (available on GreenShield’s [providerConnect](#) website) must be submitted outlining the clinical rationale supporting the request. GreenShield’s pharmacy team will review the request, and where appropriate, grant an exemption to the policy.
